DETAILED ACTION

Reasons for Allowance

1. Claims 1-36 are allowed.
2. This is examiner's statement of reasons for allowance.

Regarding claims 1-36, the prior art, either singularly or in combination, does not teach or suggest an image reading apparatus that reads out an original document image synchronously with a frequency dispersion clock gained by a modulation which makes the frequency of a reference clock change cyclically at a predetermined modulation period, comprising:

a first signal generating section that generates a first signal which turns into assert state at a predetermined period; a second signal generating section that generates a second signal which turns into assert state at a period synchronous with the modulation period of the frequency dispersion clock; and a line scanning section that moves a scanning position on the original document image in an auxiliary scanning direction and scans the original document image in a main scanning direction perpendicular to the auxiliary scanning direction each time when both the first signal and the second signal turn to assert state and thereby reads the original document image and outputs an analog image signal.

The features identified, in combination with other claim limitations, are neither suggested nor discussed by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
